## ALL THESE MACHINES

are engineered and built following traditional Euromac solid and sturdy construction standards.

**CB** and **RB** series are doctor Rewinders suitable for roll-to-roll rewind applications allowing easy web inspection and roll alignment as well as the possibility to extract print or lamination mistakes. CB doctor rewinders also feature double running direction.

Euromac is one of world's leading producers of slitting and rewinding machines for plastic films, laminates, paper, aluminium foil and other materials for food and non-food packaging.

Since 1968 it creates highly technological machines which are in continuous development, for the main players in the flexible packaging and converting industry.
